ELSEVIER

SUBJECT INDEX FOR VOLUME 6

A

Acetylcholine, Gβγ-mediated signaling and 115
Actin filament dynamics, proteins modulating 136
Activated protein C (APC), resistance to 45
Activation, and intracellular signaling in arterial smooth muscle migration vs. proliferation 143
Activation, and angiotensin II modulation of IGF-1 expression 187
Activation, and endothelin-1-dependent myocardial signaling pathways 87
Activation, and ryanodine receptor/calcium release channels 130
Activation, and tyrosine phosphorylation 179
Adenosine, and Gβγ-mediated signaling 115
Adenylyl cyclases, and Gβγ-mediated signaling 115
Adhesion, and bioengineering 122
Advanced glycation end products, and atherosclerosis 163
Adventitia, vasa vasorum from 53
AGE-modified proteins, potential relevance of to atherosclerosis 163
Agonism, endothelin-1 87
Alcohol, and coronary heart disease 175
Allograft rejection, regulation of by T lymphocytes 168
Amadori rearrangement products, and AGE-modified proteins 163
Angiotensin II, and cardiac fibrosis 193
Angiotensin II, and Gβγ-mediated signaling 115
Angiotensin II, and insulin-like growth factor 1 expression 187
Anorexigenic effect, and angiotensin II modulation of IGF-1 expression 187
Antibodies, AGE 163
Anticoagulant pathway, protein C 45
Apolipoprotein B, and gene targeting 16
Apolipoprotein E, and lipoprotein metabolism and atherosclerosis 58
Apoptosis, ceramide in regulation of 158
Arachidonate products, cytochrome P450 4
Arginine, and factor V gene 45
Arteries, cytochrome P450 arachodinate products in 4
Arteries, vasa vasorum provides nutrition for 53
Assembly, thin filament 136
Atherosclerosis, and AGE-modified proteins 163
Atherosclerosis, and bioengineering 122
Atherosclerosis, and murine bone marrow transplantation 58
Atherosclerosis, radionuclide imaging of synthetic smooth muscle cell phenotype in 226
Atherosclerosis, vasa vasorum arterial proliferation in 53
Atrial myocytes, and retroviral vectors in studying cardiovascular development 79
Atrioventricular canal malformations, anatomic hallmarks of 10
Autocrine pathways, and angiotensin II modulation of IGF-1 expression 187
Autocrine regulation, of myocardial cell growth in vitro 217

B

β-adrenoreceptors, and endothelin-1-dependent myocardial signaling pathways 87
Biochemistry, and L-type calcium channels 265
Biochemistry, and tyrosine phosphorylation 179
Bioengineering, in vascular biology 122
Biological mediators, from arachidnoic acid 4
Blood diseases, gene therapy of 25
Blood flow regulation, by adventitial vasa vasorum 53
Blood function, bioengineering and 122
Blood vessels, cytochrome P450 arachodinate products in 4
Blood vessels, and magnetic resonance microscopy 247
Bone marrow, and megakaryocytes 261
Bone marrow, and murine 58
Brain, and ryanodine receptor/calcium release channels 130
Brown coloration, AGE-modified proteins and 163

C

Ca^{2+}, and myocardial contractility regulation 95
Ca^{2+} leak, and ryanodine receptor/calcium release channels 130
Calcium, and cyclic nucleotide-gated cation channels 274
Calcium, and glycoprotein IIb-IIIa 31
Calcium channels, L-type 265
Calcium-dependent heterodimer, structural biology of 31
Calcium mobilization, and intracellular signaling in arterial smooth muscle migration vs. proliferation 143
Cancer cell metastasis, and bioengineering 122
Cardiac fibrosis, and angiotensin II 193
Cardiac muscle, and ryanodine receptor/calcium release channels 130
Cardiogenesis, and endoderm 211
Cardiomyopathies, familial 207
Cardiomyopathies, tropomodulin function and thin filament assembly in 136
Cardiotrophin 1 (CT-1), and gp130 signaling pathways 109
Cardiovascular phenotype, and mechanical activation of signaling pathways 73
Cascades, and intracellular signaling in arterial smooth muscle migration vs. proliferation 143
Catalysts, and mechanical activation of signaling pathways 73
Cation channels, cyclic nucleotide-gated 274
Cell biology, of cardiac interstitium 65
Cell biology, and mechanical activation of signaling pathways 73

©1996, Elsevier Science Inc., 1050-1738/96/$15.00 PII S1050-1738(96)00129-1

Cell-specific transgenic models, and retroviral vectors in studying cardiovascular development 79
Cell surface, and glycoprotein IIb-IIIa 31
Ceramide, and regulation of apoptosis and stress response 158
Chambers, and retroviral vectors in studying cardiovascular development 79
Channel-associated protein, and ryanodine receptor/calcium release channels 130
Cholesterol level drop, and murine bone marrow transplantation 58
Cholinergic synapses, and computational science 198
Ciliary neurotrophic factor (CNTF), and gp130 signaling pathways 109
Circulatory control, cytochrome P450 arachodinate products in 4
Cleavage sites, activated protein C 45
Cloning, of megabase fragments of human genomic DNA in yeast 16
Comparative molecular field analyses (CoMFA) 198
Complexity, turning toward (Editorial) 1
Computational science, 198
Conduction system, and retroviral vectors in studying cardiovascular development 79
Congenitally malformed hearts, anatomic hallmarks of 10
Coronary heart disease, and alcohol consumption 175
Coronary vessels, and retroviral vectors in studying cardiovascular development 79
Coupling, and Gβγ-mediated signaling 115
Cross-linking, and AGE-modified proteins 163
Cyclic nucleotide-gated cation channels 274
Cyclin-dependent kinases, and intracellular signaling in arterial smooth muscle migration vs. proliferation 143
Cycloxygenases, generation of biological mediators from arachidonic acid by 4
Cytochrome P450 arachidonate products, new class of lipid mediators 4
Cytokines, and allograft rejection 168
Cytokines, and gp130 signaling pathways 109
Cytokines, and transforming growth factor β 217
Cytoplasmic kinase, and tyrosine phosphorylation 179

D

Deletions, Pax-3 gene 255
Developmental biology, and cardiac malformations 10
Diacylglycerol, and endothelin-1-dependent myocardial signaling pathways 87
Diet, and hypercholesterolemia 58
Differentiation, and angiotensin II modulation of IGF- 1 expression 187
Differentiation, megakaryocyte 261
Differentiation, smooth muscle cell during vascular development 100
DiGeorge syndrome, and Pax-3 gene 255
Dilated cardiomyopathies, and ryanodine receptor/calcium release channels 130
Docking 198
Double-outlet right ventricle (DORV), and Pax-3 gene 255
Downregulation, and ryanodine receptor/calcium release channels 130

E

Early heart field, endoderm in initial specification of 211
Education, related to alcohol and coronary heart disease 175
Effectors, and Gβγ-mediated signaling 115
Electrophysiological approaches, and L-type calcium channels 265
Embryonic lethality, and Pax-3 gene 255
Endocardial cushion defects, anatomic hallmarks of 10
Endocrine pathways, and angiotensin II modulation of IGF-1 expression 187
Endoderm, and cardiogenesis 211
Endomyocardial biopsy (EMB), and allograft rejection 168
Endoplasmic reticulum, and glycoprotein IIb-IIIa 31
Endoplasmic reticulum, and ryanodine receptor/calcium release channels 130
Endothelial cell adhesion, and bioengineering 122
Endothelin, and Gβγ-mediated signaling 115
Endothelin-1, and myocardial signaling pathways 87
End-stage heart failure, and ryanodine receptor/calcium release channels 130
Energy production, mitochondrial 39
Environmental factors, and venous thromboembolism 45
Enzymes, and Gβγ-mediated signaling 115
Enzymes, and hypoxia-inducible factor 1 151
Epidemiology, and cardiac malformations 10
Epinephrine, and Gβγ-mediated signaling 115
Epithelium, transporting 4
Erythropoietin, and hypoxia-inducible factor 1 151
Ethnic background, related to alcohol and coronary heart disease 175
European populations, alcohol use correlated to coronary heart disease in 175
Excitation-contraction coupling, and ryanodine receptor/calcium release channels 130
Extracellular matrix, and cardiac interstitium 65
Extracellular signal-related protein kinase (ERK), and endothelin-1-dependent myocardial signaling pathways 87

F

Factor V gene mutation, resistance to activated protein C due to 45
Familial cardiomyopathies, in France 207
Family history, of protein C and protein S deficiency 45
Fibrinogen, and glycoprotein IIb-IIIa 31
Fibrinolytic system, and renin-angiotensin system (Letter to the editor) 239
Fibroblasts, and angiotensin II 193
Fibroblasts, and transforming growth factor β 217
FKBP12, and ryanodine receptor/calcium release channels 130
Flow regulation, of receptor specificity 122
Fluid mechanics, and bioengineering 122
Fluorescence, and AGE-modified proteins 163
France, cardiovascular science in 207
Free energy perturbation (FEP) 198

G

Gene targeting, yeast artificial chromosome DNA modified by 16
Gene therapy, for blood disease 25
Gene therapy, for dyslipidemia 58

©1996, Elsevier Science Inc.,
1050-1738/96/$15.00 PII S1050-1738(96)00129-1

Genetic counseling, and cardiac malformations 10
Genetics, and cardiology (Editorial) 1
Genome, mitochondrial 39
β-Globin locus, and gene targeting 16
Glomerular mesangial cells, and tyrosine phosphorylation 179
Glucose leads, and AGE-modified proteins 163
Glutamine, and factor V gene 45
Glycolytic enzymes, and hypoxia-inducible factor 1 151
Glycoprotein IIb-IIIa, structural biology of 31
Golgi apparatus, and glycoprotein IIb-IIIa 31
gp130 signaling pathways, recent advances and implications 109
G protein-coupled receptor kinases, and myocardial contractility regulation 95
G proteins, and endothelin-1-dependent myocardial signaling pathways 87
G proteins, and Gβγ-mediated signaling 115
G proteins, and tyrosine phosphorylation 179
Great vessel abnormalities, and Pax-3 gene 255
Growth, and angiotensin II modulation of IGF-1 expression 187
Growth, and gp130 signaling pathways 109
Growth, myocyte 87
Growth, smooth muscle cell during vascular development 100
Growth factors, and smooth muscle phenotype 100

H

Heart, congenitally malformed 10
Heart, development of 79
Heart, Gβγ-mediated signaling in 115
Heart failure, and angiotensin II modulation of IGF-1 expression 187
Hematologic diseases, gene therapy for 25
Hematopoietic stem cells, and gene therapy 25
Hematopoietic stem cells, and megakaryocytes 261
Heme, biosynthetic machinery of 39
Hemodynamics, and cardiac fibrosis 193
Hemodynamics, and magnetic resonance microscopy 247
Hemodynamics, and myocardial contractility regulation 95
Heterogeneity, and Gβγ-mediated signaling 115
Heteromultimeric proteins, L-type calcium channels as 265
Homeostasis, Ca^{2+} 95, 130
Homeostasis, and cardiac interstitium 65
Homeostasis, and megakaryocytes 261
Homologous recombination, and Pax-3 gene 255
Homozygosity, and Pax-3 gene 255
Hormones, and ryanodine receptor/calcium release channels 130
Human immunodeficiency virus (HIV), intracellular immunization against 25
Hypercholesterolemia, diet-induced 58
Hypercoagulability, and factor V gene mutation 45
Hyperlipidemia, in apolipoprotein E-deficient mice 58
Hypertension, genetics of 232
Hypertrophy, and angiotensin II modulation of IGF-1 expression 187
Hypertrophy, myocardial 109
Hypoplastic development, and gp130 signaling pathways 109
Hypoxia-inducible factor 1 (HIF-1), transcriptional regulation by 151

I

Immunosuppressant drugs, and ryanodine receptor/calcium release channels 130
Inflammation, and bioengineering 122
Inherited deficiency, replacement of missing or defective gene in 25
Inositol 1,4,5-triphosphate (IP_3), and ryanodine receptor/calcium release channels 130
Inositol 1,4,5-triphosphate (IP_3), and tyrosine phosphorylation 179
INSERM networks, in France 207
Inside-out signaling, and glycoprotein IIb-IIIa 31
Insulin-like growth factor 1 (IGF-1), angiotensin II modulation of expression of 187
Interleukin 6 (IL-6), and gp130 signaling pathways 109
Interleukin 11 (IL-11), and gp130 signaling pathways 109
Interstitium, cardiac 65
Intima-media, vasa vasorum proliferation into 53
Intracellular immunization, against viral disorders 25
Intraplaque hemorrhage, thin-walled neovascular channels in 53
Ion channels, and Gβγ-mediated signaling 115
Ion channels, and ryanodine receptor/calcium release channels 130
Ion transport, cytochrome P450 arachodinate products in 4
Ischemia, cellular responses to 151
Ischemia, renin-angiotensin and fibrinolytic systems in (Letter to the editor) 239

J

Jak kinase, and tyrosine phosphorylation 179

K

Knockout mice, and AGE-modified proteins 163
Knockout mice, and myocardial contractility 95
Knockout mice, Pax-3 gene in 255

L

Leukemia-inhibitory factor (LIF), and gp130 signaling pathways 109
Leukocyte/endothelial cell adhesion, and bioengineering 122
Ligands, de novo design of 198
Ligands, and glycoprotein IIb-IIIa 31
Lineage relationships, and retroviral vectors in studying cardiovascular development 79
Lipid mediators, cytochrome P450 arachidonate product 4
Lipoxygenases, generation of biological mediators from arachidonic acid by 4
Liver, and dyslipidemia 58
Long-term incubation, and AGE-modified proteins 163
Looping defects, anatomic hallmarks of 10
L-type calcium channels, structure and regulation of 265

M

Macrophages, and murine bone marrow transplantation 58
Macrophage scavenger receptor, and AGE-modified proteins 163
Magnetic resonance microscopy, with cardiovascular applications 247
Mass transfer, and bioengineering 122
Mechanical activation, of signaling pathways in cardiovascular system 73
Mechano-chemical signal transduction 73
Mechanotransduction, 73
Megakaryocytes, glycoprotein IIb-IIIa expression in 31
Megakaryocytes, precursors and progeny 261

©1996, Elsevier Science Inc., 1050-1738/96/$15.00 PII S1050-1738(96)00129-1

Mesoderm, presumptive heart 211
Metastasis, and bioengineering 122
Microvessels, cytochrome P450 arachodinate products in 4
Migration, arterial smooth muscle cell 143
Mitochondrial oxidative pathways, and cardiac impairment 39
Mitogen-activated protein (MAP) kinase, and endothelin-1-dependent myocardial signaling pathways 87
Mitogen-activated protein (MAP) kinase, and intracellular signaling in arterial smooth muscle migration vs. proliferation 143
Molecular cardiology, in postmolecular era (Editorial) 1
Molecular genetics, in France 207
Molecular genetics, and L-type calcium channels 265
Molecular genetics, and Pax-3 gene 255
Molecular markers, heat-specific 211
Morphogenesis, and Pax-3 gene 255
Mouse systems, for studying genetics of hypertension and related disorders 232
Mural thrombosis, thin-walled neovascular channels in 53
Murine bone marrow transplantation, and macrophage role in lipoprotein metabolism and atherogenesis 58
Mutations, factor V gene 45
Mutations, introduction into yeast artificial chromosomes 16
Mutations, and mitochondrial oxidative pathways 39
Mutations, Pax-3 gene 255
Myocardial contractility, regulation of 95
Myocardial function, normal 39
Myocardium, endothelin-1-dependent signaling pathways in 87
Myogenesis, skeletal muscle 100
Myogenic determination genes, discovery of 100

N

Neoplastic disorders, gene therapy of 25
Neovascular channels, thin-walled 53
Neural crest development, Pax-3 gene in 255
Neural elements, and retroviral vectors in studying cardiovascular development 79
Neurons, and cyclic nucleotide-gated cation channels 274
Neurotransmitters, and ryanodine receptor/calcium release channels 130
Nitric oxide (NO), and angiotensin II 193
Norepinephrine, and Gβγ-mediated signaling 115
Nuclear respiratory factors, and nuclear-mitochondrial interaction pathways 39

O

Olfactory neurons, and cyclic nucleotide-gated cation channels 274
Oncostatin M (OM), and gp130 signaling pathways 109
Outflow tract abnormalities, and Pax-3 gene 255
Oxidative pathways, mitochondrial 39
Oxidative phosphorylation, and hypoxia-inducible factor 1 151

P

p70 S6 kinase, and intracellular signaling in arterial smooth muscle migration vs. proliferation 143
Paracrine regulation, of angiotensin II 193
Paracrine regulation, of angiotensin II modulation of IGF-1 expression 187
Paracrine regulation, of myocardial cell growth in vitro 217
Parathyroid gland abnormalities, and Pax-3 gene 255
Pax-3 gene, in neural crest and cardiovascular development 255
Persistent truncus arteriosus (PTA), and Pax-3 gene 255
Phenotype, cardiovascular 73
Phenotype, smooth muscle 100, 226
Phosphatidylinositol-4,5-biphosphate, and endothelin- 1-dependent myocardial signaling pathways 87
Phospholipases, and Gβγ-mediated signaling 115
Phosphorylation, and L-type calcium channels 265
Phosphorylation, and myocardial contractility regulation 95
Phosphorylation, tyrosine 179
Physical-biochemical interface, and mechanical activation of signaling pathways 73
Plaque disruption, thin-walled neovascular channels in 53
Platelet-derived growth factor (PDGF), and intracellular signaling in arterial smooth muscle migration vs. proliferation 143
Platelets, glycoprotein IIb-IIIa expression in 31
Platelets, and megakaryocytes 261
Point mutation, factor V gene 45
Pointed end capping protein, actin filament 136
Polygenetic disease, thrombosis as 45
Polyploidy, and megakaryocytes 261
Pore-forming α_1 subunits, L-type calcium channel 265
Postmolecular era, turning toward complexity (Editorial) 1
Programmed cell death, ceramide in regulation of 158
Proliferation, arterial smooth muscle cell 143
Proliferation, megakaryocyte 261
Prolyl isomerase, and ryanodine receptor/calcium release channels 130
Protein C anticoagulant pathway, in maintenance of vascular patency 45
Protein kinase C (PKC), and endothelin-1-dependent myocardial signaling pathways 87
Protein kinases, and endothelin-1-dependent myocardial signaling pathways 87
Protein kinases, and intracellular signaling in arterial smooth muscle migration vs. proliferation 143
Protein S, families deficient in 45
Prototype morphology, of congenitally malformed hearts 10

Q

Quantitative modeling, and bioengineering 122
Quantitative structure-activity relationship (QSAR) methods 198

R

Race, related to alcohol and coronary heart disease 175
Radionuclide imaging, of synthetic smooth muscle cell phenotype 226
Raf protein kinase, and endothelin-1-dependent myocardial signaling pathways 87
Ranking 198
Rapamycin, and ryanodine receptor/calcium release channels 130
Receptor kinases, and myocardial contractility regulation 95
Receptor specificity, and bioengineering 122
Remodeling, and angiotensin II modulation of IGF-1 expression 187
Renal control, cytochrome P450 arachodinate products in 4

 ©1996, Elsevier Science Inc., 1050-1738/96/$15.00 PII S1050-1738(96)00129-1

Renin-angiotensin system, and cardiac fibrosis 193
Renin-angiotensin system, and computational science 198
Renin-angiotensin system, and fibrinolytic system (Letter to the editor) 239
Renin-angiotensin system, and insulin-like growth factor 1 expression 187
Replication, mitochondrial 39
Respiration, mitochondrial 39
Respiratory chain subunits, coordination of synthesis with components of mitochondrial transcription 39
Retroviral vectors, to study cardiovascular development 79
Rhythmic beating, endoderm in 211
Ryanodine receptor/calcium release channels, expression and regulation of 130

S

Saccharomyces cerevisiae, cloning of up to megabase fragments of human genomic DNA in 16
Sarcoplasmic reticulum, and ryanodine receptor/calcium release channels 130
Schiff base, and AGE-modified proteins 163
Scoring 198
Sensory signal transduction, and cyclic nucleotide-gated cation channels 274
Seven-transmembrane receptor, and tyrosine phosphorylation 179
Sex, related to alcohol and coronary heart disease 175
Shuttle vectors, retrovirus-based 79
Sickle cell disease, bioengineering and 122
Signal transduction, and apoptosis 158
Signal transduction, in arterial smooth muscle migration vs. proliferation 143
Signal transduction, and cyclic nucleotide-gated cation channels 274
Signal transduction, and Gβγ-mediated signaling 115
Signal transduction, and gp130 109
Signal transduction, and L-type calcium channels 265
Signal transduction, mechano-chemical 73
Signaling pathways, and angiotensin II 179
Signaling pathways, and cardiac interstitium 65
Signaling pathways, endothelin-1-dependent 87
Signaling pathways, gp 130 109
Signaling pathways, mechanical activation of 73
Signaling pathways, and ryanodine receptor/calcium release channels 130
Single vessels, and magnetic resonance microscopy 247
Skeletal muscle, and myogenesis 100
Skeletal muscle, and ryanodine receptor/calcium release channels 130
Smoking, related to alcohol and coronary heart disease 175
Smooth muscle cells, and angiotensin II modulation of IGF-1 expression 187
Smooth muscle cells, arterial 143
Smooth muscle cells, and bioengineering 122
Smooth muscle cells, growth and development of during vascular development 100
Smooth muscle cells, radionuclide imaging of synthetic smooth phenotype 226
Smooth muscle cells, and tyrosine phosphorylation 179
Specification, initial 211
Sphingolipid turnover, in apoptosis regulation 158
Splotch mutant, and Pax-3 gene 255
Src cytoplasmic kinase, and tyrosine phosphorylation 179
Starling's law of the heart (Letter to the editor) 245, (Letter reply) 246
Stress response, ceramide in regulation of 158
Systems analysis, and bioengineering 122

T

Target cells, for gene therapy of blood diseases 25
Tetrameric structures, and ryanodine receptor/calcium release channels 130
Thermodynamic integration (MCTI) 198
Thickening, arterial 53
Thin filament assembly, in cardiac myocytes 136
3D database searching 198
Thrombophilia, in France 207
Thrombopoietin, and megakaryocytes 261
Thrombosis, and bioengineering 122
Thrombosis, genetic risk factors in 45
Thrombosis, and megakaryocytes 261
Thrombosis, thin-walled neovascular channels in 53
Thyroid gland abnormalities, and Pax-3 gene 255
Time point, and retroviral vectors in studying cardiovascular development 79
Time to market, of new pharmaceuticals 198
T lymphocytes, cardiac allograft rejection regulated by 168
T lymphocytes, and ryanodine receptor/calcium release channels 130
Transcription, mitochondrial 39
Transcriptional activators, and nuclear genes required for mitochondrial respiration 39
Transcriptional regulation, by hypoxia-inducible factor 1 151
Transforming growth factor β (TGF-β), in autocrine/paracrine regulation of myocardial cell growth in vitro 217
Transgenic mice, and myocardial contractility 95
Transgenic mice, and retroviral vectors in studying cardiovascular development 79
Transgenic mice, yeast artificial chromosomes in generation of 16
Translation, and intracellular signaling in arterial smooth muscle migration vs. proliferation 143
Transmembrane heptahelical receptors, endothelin-1 87
Transplantation, murine bone marrow 58
Transporting epithelia, and arachidonic acid metabolites 4
Tropomodulin, function of in cardiac myocytes 136
Troponin C, as length sensor in Starling's law of the heart (Letter to the editor) 245, (Letter reply) 246
Tubular segments, renal 4
Tyrosine phosphorylation, in angiotensin II signaling 179

U

Upregulation, and ryanodine receptor/calcium release channels 130

V

Valves, and retroviral vectors in studying cardiovascular development 79
Vasa vasorum, structure and function of 53
Vascular biology, bioengineering contributions in 122
Vascular disease, smooth muscle cells in 100

©1996, Elsevier Science Inc., 1050-1738/96/$15.00 PII S1050-1738(96)00129-1

Vascular endothelial growth factor (VEGF), and hypoxia-inducible factor 1 151
Vascular injury, and intracellular signaling in arterial smooth muscle migration vs. proliferation 143
Vascular patency, maintenance of 45
Vascular system, and cardiac interstitium 65
Vascular tree, renal 4
Vasoactive hormones, and arachidonate products 4
Vasoactive peptide, myocardial signaling pathways dependent on 87
Vectors, retroviral 79
Vectors, and target cells for gene therapy of blood diseases 25
Vectors, yeast artificial chromosome 16
Veins, cytochrome P450 arachodinate products in 4
Veins, vasa vasorum provides nutrition for 53
Venous thrombosis, activated protein C resistance in 45
Ventricular myocardium, and gp130 signaling pathways 109
Ventricular myocytes, and retroviral vectors in studying cardiovascular development 79
Vertebrate heart, retroviral vectors to study development of 79
Viral disorders, intracellular immunization against 25
Visual neurons, and cyclic nucleotide-gated cation channels 274
von Willebrand factor (vWf), and glycoprotein IIb-IIIa 31

W

Wall shear stress, and bioengineering 122
Weight loss, and angiotensin II modulation of IGF-1 expression 187

Y

Yeast artificial chromosome (YAC) DNA, generation of transgenic mice from 16
